Cavalli & Meccardi ....

(To yours of August 20 -- hopefully better  
lots than mine.)

Best of all, why don't you discuss this  
directly with Luca (at Stanford).

I suspect that multistep mutations  
increases in resistance are chromosomal  
but there probably deserves to be a critical  
reexamination to be sure: phenomena  
attributed to epistasis might be an artifact  
of gene dosage when you are free to subvert  
your own rules of plasmid transmission.

I was glad to hear from you.

Joshua
